

Elephant® Beta simulator

Elephant® Beta cabin

Elephant® Beta-15

PC-Based Training Tool – Elephant® Beta Simulator

The Elephant® Beta simulator is a state-of-the-art PC-based training tool.

It enables operators as well as trainees to simulate most aspects of aircraft de-icing in a lifelike environment.

This includes simulation with snowfall, reduced visibility and selection of different aircraft, from small commuters up to – and including – the Airbus A 380. It also allows for multiple operators to de-ice one aircraft to improve teamwork skills and enhance operational performance.

The Elephant® Beta simulator will not only add to the safety of de-icing operations, but will also reduce costs and time involved.

The simulator allows you to choose between an Elephant® Beta and a Beta-15 deicer.

MAJOR ADVANTAGES

- Reduces time and cost
- Allows completely safe training
- Multiple operators on one aircraft
- Operations for Beta or Beta-15 deicer.
- Suitable both for recruitment and training

General Data

Basic Kit:

- Software
- Console / Pedals
- Elephant® Beta and Beta-15 in same package
- Free software update until one year after delivery

Module Options:

- Multiple users: up to six de-icers working on one aircraft simultaneously
- Language versions: English, German or French
- Additional software modelling (customer's airport, additional aircraft or customer's truck-specific configuration)

PC Requirements (as per September 2007):

- Video card: NVIDIA 8800 GTX
- Operating system: Genuine Windows ® XP Professional
- RAM: GIG Dual Channel DDR SDRAM/533 MHz
- Recommended monitor: 40" or 42" LCD or Plasma monitor

(Full listing of all PC requirements/recommendations available upon request)
